The *Journal* is registered with the Copyright Clearance Center, 27 Congress St., Salem, Mass. 01970. Organizations in the USA which are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per-copy fee of $5.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0022-1120/89/$5.00 + .00

ISI Tear Sheet Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA is authorized to supply single copies of separate articles for private use only.

For all other use of material from the *Journal* permission should be sought from Cambridge or the American Branch of Cambridge University Press.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS (ISSN 0022-1120) is published by the Cambridge University Press in 12 volumes each year. All orders must be accompanied by payment. Single volumes cost £38 net (US $75 in the USA and Canada) plus postage. The subscription price in the UK (which includes postage) to volumes 198–209, 1989, is £410, £450 elsewhere (US $880 in the USA and Canada) for institutions: £225 (US $450) for individuals. Copies of the journal for subscribers in the USA and Canada are sent by air to New York. Second class postage is paid at New York, NY, and at additional mailing offices. Claims for missing issues will be considered only if made immediately upon receipt of the subsequent issue. Copies of back numbers are available from Cambridge University Press. POSTMASTER: send address changes in USA and Canada to *Journal of Fluid Mechanics*, Cambridge University Press, 110 Midland Avenue, Port Chester, New York, NY 10573.

Volume 202 May 1989

CONTENTS

Frontogenesis in a fluid with horizontal density gradients. J. E. Simpson and P. F. Linden *page* 1

A study of linearized oscillatory flow past particles by the boundary-integral method. C. Pozrikidis 17

Spectral evolution of wind-generated surface gravity waves in a dispersed ice field. D. Masson and P. H. LeBlond 43

One-dimensional model for the Rijke tube. C. Nicoli and P. Pelcé 83

Numerical experiments in forced stably stratified turbulence. Jackson R. Herring and Olivier Métais 97

Numerical simulations of freely evolving turbulence in stably stratified fluids. Olivier Métais and Jackson R. Herring 117

Rossby–Kelvin instability: a new type of ageostrophic instability caused by a resonance between Rossby waves and gravity waves. Satoshi Sakai 149

Breaking of wind-generated waves: measurements and characteristics. Paul A. Hwang, Delun Xu and Jin Wu 177

Cross-sectional convection induced by an insulated boudary in a cylinder. Charles Quon 201

The viscosity–volume fraction relation for suspensions of rod-like particles by falling-ball rheometry. William J. Milliken, Moshe Gottlieb, Alan L. Graham, Lisa A. Mondy and Robert L. Powell 217

Measurements of heat diffusion from a continuous line source in a uniformly sheared turbulent flow. U. Karnik and S. Tavoularis 233

Reynolds stress development in pressure-driven three-dimensional turbulent boundary layers. Shawn D. Anderson and John K. Eaton 263

Spectral approach to non-isotropic turbulence subjected to rotation. C. Cambon and L. Jacquin 295

A theory of turbulent transport. J. Weinstock 319

Hydrodynamic and morphological stability of the unidirectional solidification of a freezing binary alloy: a simple model. S. A. Forth and A. A. Wheeler 339

The role of transverse secondary instabilities in the evolution of free shear layers. G. P. Klaassen and W. R. Peltier 367

A natural low-frequency oscillation of the flow over an airfoil near stalling conditions. K. B. M. Q. Zaman, D. J. McKinzie and C. L. Rumsey 403

The onset of convective instability in a triply diffusive fluid layer. Arne J. Pearlstein, Rodney M. Harris and Guillermo Terrones 443

Droplet pair interactions in a shock-wave flow field. S. Temkin and G. Z. Ecker 467

Divided discharges for divided flows. Ronald Smith 499

The linear stability of viscous compressible plane Couette flow. W. Glatzel 515

Instabilities in channel flow with system rotation. P. Henrik Alfredsson and Håkan Persson 543

Three-dimensional marginal separation. P. W. Duck 559

The effect of geometry on the gravitational instability of a buoyant region of viscous fluid. John R. Lister and Ross C. Kerr 577

Reviews

Movement of Sediment in Open Channels, by Yu. A. Ibad-Zade 595

Very Slow Flows of Solids, by L. A. Lliboutry 596

Corrigendum 598
